

Specialists in complex concrete forming & finishing

Dry & wet sprayed concrete application  
Groundwork & drainage expertise  
Ground strengthening & stabilisation  
Concrete repair & refurbishment  
Industrial flooring solutions

## Trusted expertise

Midas Construction (UK) Limited has become renowned for the professionalism, precision & accuracy of our work. Our exceptional breadth of experience in the field of complex concrete forming and finishing has earned us a respected profile within the UK construction industry.

We are trusted for our timely, accurate & cost-effective in-situ solutions for all aspects of concrete laying, powerfloat, dry & wet sprayed concrete applications, complex groundwork and drainage solutions, concrete repairs, and industrial flooring.

**Our clients include:** Local Authorities such as the London Boroughs of Southwark, Camden, Westminster, and Bexley, plus Wycombe, Burton upon Trent, and Scarborough; companies including Charter PLC, Freestyle Skateparks, RDA Architects, DIVE Architects, J Poling & Associates, Reddington Group.

## Skateparks

We're among the UK's leading concrete skate park builders - a testament to our capabilities in concrete construction. Concrete is ideally suited to skateparks, but it requires exceptional skill to prepare, lay & finish. Successful skate parks need the smoothest surface possible, requiring precision application of sprayed concrete, followed by meticulous finishing. Power float & highly-skilled hand towelling is essential to achieve a perfectly uniform surface, with smooth radius curves that are free from any ripples or aberrations.

Midas Construction have been the contractor of choice for many of the UK's premier skateparks. Concrete is the preferred medium for skatepark construction but requires exceptional skill in its implementation, from the initial groundwork preparation all the way through to final finishing of the surface. It's fair to say that the quality of the concrete can make or break a skate park.

Our reputation for excellence on these most demanding of projects reflects the experience and expertise that we are able to bring to them.

We have constructed more than twenty skate parks around the UK, including flagship projects such as Canteloves in Camden where, in addition to extremely complex formwork, we performed all ancillary works including pathways, drainage, landscaping and construction of the pavilion.

Whites Grounds skate park, at London Bridge (right), is quite unique. A fully featured skate park built under the atmospheric 19th-century railway arches of London Bridge.

Every skatepark project presents not just specific engineering challenges but also a host of other considerations: working closely with architects, park designers and local authority officers; thorough and accurate project management; and the need for good communication and a considerate, responsible attitude toward both the local community and the environment during construction. Approaching every project with equal commitment & professionalism, we bring a proven track record in successfully fulfilling every aspect of these diverse demands.

**Midas Construction (UK) Limited are at the forefront of specialist concrete construction techniques and the production of freeform designs and advanced formwork solutions. We also provide vital site preparation expertise in the areas of groundwork, ground strengthening & stabilisation, and drainage systems.**

From initial ground works through to finished skate park, every stage requires a wealth of skill & expertise to ensure success and avoid costly or wasteful mistakes.

## ➤ Drainage, landscaping & utilities

We are specialists in deep drainage and pump chamber installation, and complex soakway systems designed to drain mass areas where there is no existing pipe infrastructure in place. In addition to these kind of groundworks we also undertake ancillary work that can include installation of ducting, lighting, CCTV, pathways and access roads, as well as bringing water and gas services on to a site.

### Health & safety

Midas Construction (UK) Limited recognise that full and conscientious compliance with Health & Safety practice is of paramount importance in our industry. The safety and welfare of our employees and the public is prioritised in all aspects of site and operational practice.

All our operatives are always fully trained in the use of any equipment, and we keep safety awareness training up to date with regular on and off site courses. We ensure compliance with industry requirements to meet the standards set out by the CSCS (Construction Skills Certification Scheme), and all our operatives hold valid CITB certification.
